**Abstract:** *Constructionist-fractal method is essentially a semiotic- hermeneutics method. It traces the analysis of the transmodern paradigm under three classical aspects: syntactic, semantic and pragmatic. The model's syntax is the law - ontognoseology axioms that will be repeated in other areas of the transmodern speech. Semantics consists of transmodern upgrading of philosophy and scientific data. In the semantic analysis we find a structural model of cognitive reconstruction of the world, based on the idea of fractal holism called quantum metaphysics. Constructionist-fractal analysis method consists in identifying a paradigm agreement to semiotic scales and thereby identifying cultural axioms, epistemic, or social and successive restructuring of cultural or social acts consistent with the paradigm model proposed.*

*This study appears as a result of the researches from the project "Qualifications and European standard in social work", contract POSDRU/18/1.2./G/11966.*

**Keywords:** *Social constructionism, epistemology, transmodern paradigm, transdisciplinarity*
